

## **Problem 1: Dynamic ListBox with Language Descriptions**

### **Problem Statement:**

Develop an ASP.NET web page that displays a ListBox containing various programming languages (e.g., Java, JavaScript, C#, etc.). When a user selects an option from the ListBox, the page should dynamically display a brief introductory description of the selected language in a Label control. Ensure that multiple selections are not allowed.

## **Problem 2: Dynamic Table Generation with User-Defined Rows and Columns**

### **Problem Statement:**

Create an ASP.NET web page that allows users to dynamically generate a table with a specified number of rows and columns. The user should input the desired dimensions using two DropDownList controls (for rows and columns). Upon clicking a "Generate" button, the table should be rendered with the following specifications:

- Border color should be red.
- The first cell of each row should contain a DropDownList with language options (Urdu, English, Arabic, Chinese).
- All other cells should display their respective row and column numbers in the format {x, y}
- Every cell in the last row should contain a RadioButtonList with options (1, 2, 3, 4).
- The background of the last row should be gray.
